

Subject:

Upgrade Knowledge workers to use Tablet Devices on the Enterprise

Executive Summary:

Leadership would like to replace laptops for all knowledge workers in our organization with the tablet. They are considering either latest version of iPad or Google Nexus devices.

Note: Including all stakeholders I know – please forward this meeting to anyone I might have missed.

Objective:

As part of this meeting we would like to identify considerations for such an upgrade to help leadership team determine cost/benefits for such a project and define next steps.

Considerations for discussion:

- What are the typical users in our organization and which applications do they have installed?
Where can we get full list of applications – is this an application support team?
- Can all applications we currently have run on iPad/Android.
- Can tablet device connect to the network
- Can VPN be used on iPad/Android ?
- Cost benefits analysis for the upgrade
- When can we gather all of this information and present to the leadership?
- Next Steps
